Analysis

The market stabilized yesterday as it began the session strong but witnessed some selling pressure that sent prices near their mid session levels. Our levels are still the same as the 11,200 is our current important stop. We are not expecting a breach of this level. Actually, we are expecting a strong rise to occur soon.

This year will probably close higher but not necessarily above 11,700; we expect, however, this level to be broken aggressively by the beginning of the next year.

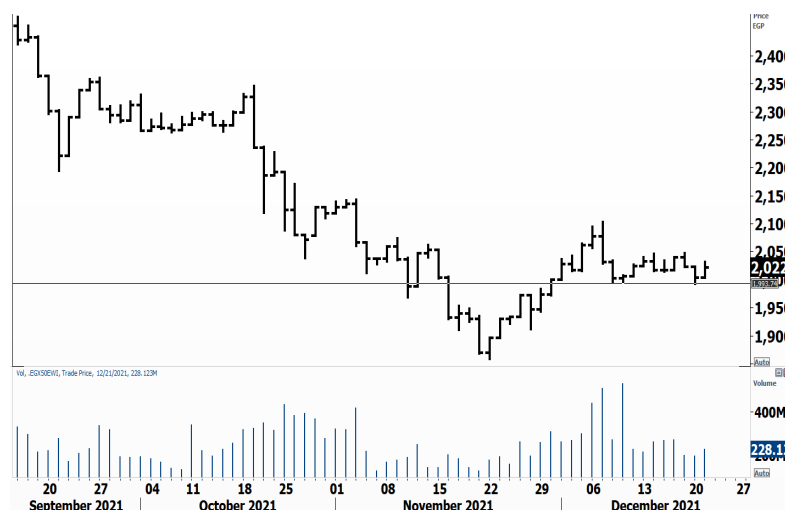

Market breadth is improving significantly and this is a good signal for the market.

Egyptian Equal Weights Index .EGX 50

Analysis

Still maintaining itself above its support that lies at 1,995. The EGX 50 index rebounded from its support but still needs to break above 2,050 before repurchasing.

Those who want clear confirmation can wait for the 2,100 breakout. We believe, however, that a break above 2,050 will be an early signal of a strong rise to come.

Resistance

RMDA 

Closed above 2.72 after breaking it yesterday. Despite that the stock did not close at its high, we expect the overall rise to continue; we recommend buying with a stop below 2.58 and a target around 3.2.

Support

No stocks broke their support yesterday

Testing

Support

DSCW 

The 0.67 level is the stock's historical low and the most important level to watch. If we are talking classically, then we should see a strong rebound from here. The stock, however, is underperforming; this is why we recommend waiting to see how it will perform at these levels before taking any action.

Resistance

TMGH 

Trying to break above 9 and close above it so it confirms a new breakout. TMGH witnesses intraday breaks but closes below 9 at the end of the session. It is important to note that the stock already broke its major resistance (7.7) and is currently witnessing an uptrend; thus this rise is expected to continue with a target around 12.

AIND 

Witnessed high volumes yesterday and closed near the session's high, hinting of a significant breakout above 0.38. This breakout will trigger a buy signal with a target at 0.5

PORT 

Wait for a break above 0.54 before stepping in. Such a breakout will probably lead to another break above 0.56.

Symbol	S. Description	Last	Buying Area 1	Buying Area 2	Selling Area 1	Selling Area 2	Selling Area 3	Stop Loss
--------	----------------	------	---------------	---------------	----------------	----------------	----------------	-----------

N.B. please note that the levels are too close as these trading opportunities only suit T+0 speculators

The prices that are accompanied by a green arrow in the above table show resistance levels. Thus, a break above these levels will pave the way to achieve one (or all) of the targets.

The area between buying area 1 and buying area 2 is a trading area.

Guidelines

Bullish

Bearish

Neutral

Trend: (Upgrade, Downgrade): Change in trend color refers to upgrade or downgrade in the trend relative to the previous trend direction. E.g. change from "↓ Down" to "↔ Flat" is considered an upgrade and vice versa.

Buy: Buy the full position.

P.Buy: Buy portion of a position

Hold: Don't Buy or sell.

P.SELL: Sell portion of a position.

Sell: Sell the full position.

Stop Loss: Completely exit the position (or) Re-entry in cases of Selling.

Tips on reading the report

The first page includes an analysis of two major indices in the Egyptian Stock Market; the norm is that we will analyze both the EGX 30 and 70, but sometimes we will compare the EGX 30 to its 50 counterpart if there is important information in this comparison. We also use the Hermes Last Index interchangeably with the EGX 30. The .HRMSL index has an important edge; it uses last prices instead of VWAP. First thing our clients should do is to read the indices analysis carefully to have a clear understanding on our overall view.

The second page includes stocks that broke out beyond their resistance levels, and those that violated their support levels. It also includes stocks that are testing their support levels and those that are testing their resistance. This analysis is important and it is the core of our recommendations. It is important to note though that not all stocks that are testing their support levels are bullish, and not all that are testing their resistance levels are bearish. To make it easier for our clients, we have placed a bull face 🐮 if we consider the stock under study bullish, and a bear face 🐻 if we consider it bearish. We also added a big bullet 📌 if we are neutral.

It is important to note that you might find a stock that we consider bullish in our analysis (in the breakouts/testing section) but it remains as a hold or partial sell in the table. The conflict here is that the table is more conservative. This will not be an issue with our clients, because our analysis will explain why we are being bullish/bearish on the stock.
