

# TECH TO THE POINT

29-Jan-2020

This report must be read with the disclaimer on the last page

#### **Analysis**

The rebound that occurred in the second half of yesterday's session gave some hope to investors of a potential short-term rise. The previous broken bottom lies at 1,650; a break above it might lead the index near 13,800 initially. Those who want to trade this tight range need to be very cautious and use strict stop losses and targets.

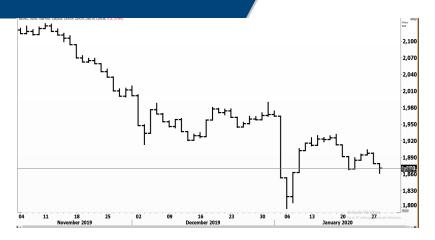

Those who buy to hold their positions should wait for a clear and confirmed breakout above 14,100.

#### 

#### **Analysis**

The EGX 50 index did not break its stop yet as it closed above 1,865 at the end of the session. We advice investors to wait for a break above 1,905 at least to step in slightly, and to wait for a confirmed breakout above 1,930 to buy more aggressively.

As we have been seeing lately, the market is not able to witness an extended upward move, this is why we are still worried about the overall situation.

#### Resistance

The breakout was confirmed yesterday and the stock closed at its limit up. We expect ETEL to reach 11.75-12; first minor hurdle lies at 10.75.

### **Support**

No stocks broke their support yesterday.

# **Testing**

#### Support

The stock approached its support that lies at 11.5 and rebounded to close at 12.09 at the end of the session. Those who want to step in can do so by placing a stop below 11.5 and use a target near 13.3-13.5.

#### Resistance

#### Tips on reading the report

The first page includes an analysis of two major indices in the Egyptian Stock Market; the norm is that we will analyze both the EGX 30 and 70, but sometimes we will compare the EGX 30 to its 50 counterpart if there is important information in this comparison. We also use the Hermes Last Index interchangeably with the EGX 30. The .HRMSL index has an important edge; it uses last prices instead of VWAP. First thing our clients should do is to read the indices analysis carefully to have a clear understanding on our overall view.

The second page includes stocks that broke out beyond their resistance levels, and those that violated their support levels. It also includes stocks that are testing their support levels and those that are testing their resistance. This analysis is important and it is the core of our recommendations. It is important to note though that not all stocks that are testing their support levels are bullish, and not all that are testing their resistance levels are bearish. To make it easier for our clients, we have placed a bull face if we consider the stock under study bullish, and a bear face if we consider it bearish. We also added a big bullet if we are neutral.

It is important to note that you might find a stock that we consider bullish in our analysis (in the breakouts/testing section) but it remains as a hold or partial sell in the table. The conflict here is that the table is more conservative. This will not be an issue with our clients, because our analysis will explain why we are being bullish/bearish on the stock.
