

TECH TO THE POINT

3-Mar- 2021

This report must be read with the disclaimer on the last page

Analysis

The market is already in its corrective phase and is expected to continue its decline until the 11,200 level where buyers might appear.

We will not recommend stepping in before a clear breakout above 11,700, or if the market rebounds from the 11,200 target. Sellers are getting more aggressive these days and it is not a good idea to step in here where there is still some downward potential.

This short-term correction, which was expected to take place, does not contradict with our medium-term bullish view.

Egyptian Equal Weights Index .EGX 50

Analysis

Because of the stronger decline on the EGX 50 index, due to the strong decline in small caps, the index is approaching its target that lies at 2,300. We will keep an open eye at this level to see whether we will rebound from these levels or not.

The EGX 30 still has some downward potential, this might lead the EGX 50 to surpass 2,300 on a temporary basis.

In all cases, we will watch how the indices will behave near their targets and act accordingly.

Resistance

No stocks broke their resistance yesterday

Support

Broke 0.65 to the downside, closing at 0.629 at the end of the session. The 0.6-0.61 area is more important support to watch. We recommend to wait for a break below this support range before triggering stops.

Testing

Support

Resistance

Challenging to break above 10.9 upwards. Such a breakout will be an early signal of a potential breakout above 11.35, which will lead it near 13.5.

The 10.8-11 range is a resistance that needs to be broken upwards. Those who want a clear confirmation are recommended to wait for a breakout above 11.3 before stepping in.

Symbol

S. Description

Buying Area 1 Buying Area 2 Selling Area 1 Selling Area 2 Selling Area 3 Stop Loss

N.B. please note that the levels are too close as these trading opportunities only suit T+0 speculators

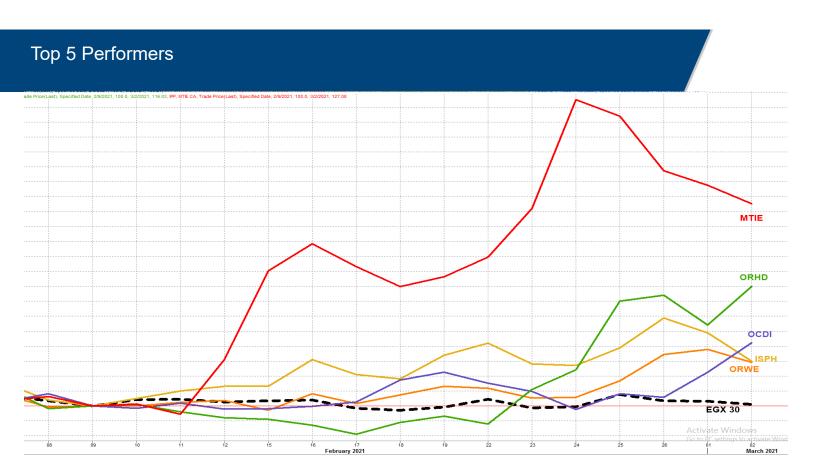

Last

The prices that are accompanied by a green arrow in the above table show resistance levels. Thus, a break above these levels will pave the way to achieve one (or all) of the targets.

The area between buying area 1 and buying area 2 is a trading area.

Yesterday's T+0/T+1 Trade.

Tips on reading the report

The first page includes an analysis of two major indices in the Egyptian Stock Market; the norm is that we will analyze both the EGX 30 and 70, but sometimes we will compare the EGX 30 to its 50 counterpart if there is important information in this comparison. We also use the Hermes Last Index interchangeably with the EGX 30. The .HRMSL index has an important edge; it uses last prices instead of VWAP. First thing our clients should do is to read the indices analysis carefully to have a clear understanding on our overall view.

The second page includes stocks that broke out beyond their resistance levels, and those that violated their support levels. It also includes stocks that are testing their support levels and those that are testing their resistance. This analysis is important and it is the core of our recommendations. It is important to note though that not all stocks that are testing their support levels are bullish, and not all that are testing their resistance levels are bearish. To make it easier for our clients, we have placed a bull face if we consider the stock under study bullish, and a bear face if we consider it bearish. We also added a big bullet if we are neutral.

It is important to note that you might find a stock that we consider bullish in our analysis (in the breakouts/testing section) but it remains as a hold or partial sell in the table. The conflict here is that the table is more conservative. This will not be an issue with our clients, because our analysis will explain why we are being bullish/bearish on the stock.
