Analysis

Buyers are not there and they are terrified to enter even though selling pressure is weak. The problem here is that any renewed selling pressure will lead the market to ugly levels. Our support lies at 14,000; unfortunately, this support is in jeopardy due to the total absence of buying power. We were actually expecting a strong rebound from current levels but given the current situation, if sellers appear once again, they will exert strong pressure on the market, which will lead major indices to much lower levels.

We are waiting on the sidelines and watching the market and will only enter if a clear rebound occurs from these levels.

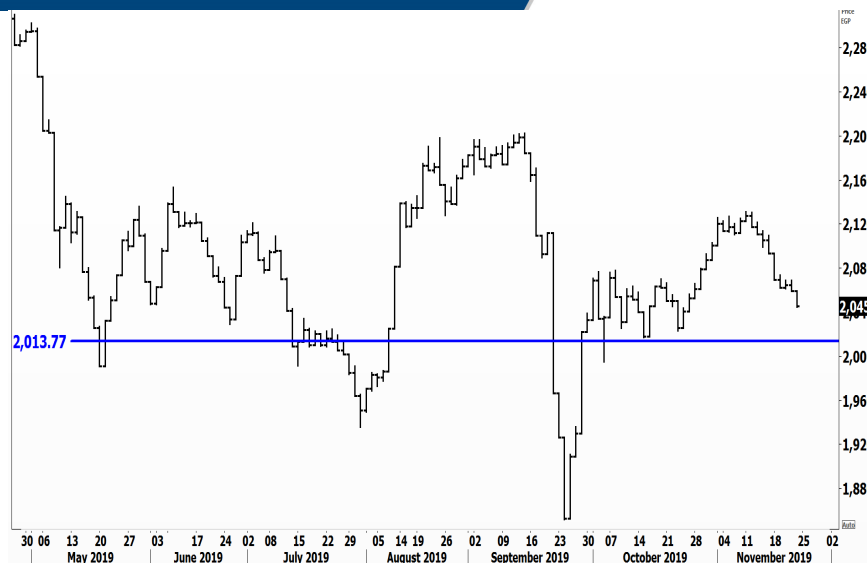

Egyptian Exchange Equal Weights Index EGX50

Analysis

Because of the significant weakness of blue chips compared to other stocks, the EGX 50 index is still above its support level. Thus, the EGX 30 index is clearly underperforming due to the bad performance of its heavy constituents.

The current decline, however, is general, so all stocks are severely affected; we are waiting for a rise from above the 2,000 level; if this occurs, along with the EGX 30 rebound, a new buy signal will be triggered.

For now, we are still in risk of a continuation of the current decline.

Resistance

No stocks broke their resistance yesterday.

Support

Testing

Support

COMI  The 78.5 level is an important support to watch. If COMI breaks this support, it will reach 75 as a minimum target. Position holders are recommended to place their stop below 78.5

PHDC  The stock has a minor support at 2.04. The ability of PHDC to maintain itself is a positive signal. If, however, the 2.04 level is broken downwards, stops will be hit. On the other hand, if a rebound occurs from here, the 2.15 level will be the first resistance to watch

Resistance

Guidelines

Bullish

Bearish

Neutral

Trend: (Upgrade, Downgrade): Change in trend color refers to upgrade or downgrade in the trend relative to the previous trend direction. E.g. change from "↓ Down" to "↔ Flat" is considered an upgrade and vice versa.

Buy: Buy the full position.

P.Buy: Buy portion of a position

Hold: Don't Buy or sell.

P.SELL: Sell portion of a position.

Sell: Sell the full position.

Stop Loss: Completely exit the position (or) Re-entry in cases of Selling.

Tips on reading the report

The first page includes an analysis of two major indices in the Egyptian Stock Market; the norm is that we will analyze both the EGX 30 and 70, but sometimes we will compare the EGX 30 to its 50 counterpart if there is important information in this comparison. We also use the Hermes Last Index interchangeably with the EGX 30. The .HRMSL index has an important edge; it uses last prices instead of VWAP. First thing our clients should do is to read the indices analysis carefully to have a clear understanding on our overall view.

The second page includes stocks that broke out beyond their resistance levels, and those that violated their support levels. It also includes stocks that are testing their support levels and those that are testing their resistance. This analysis is important and it is the core of our recommendations. It is important to note though that not all stocks that are testing their support levels are bullish, and not all that are testing their resistance levels are bearish. To make it easier for our clients, we have placed a bull face 🐮 if we consider the stock under study bullish, and a bear face 🐻 if we consider it bearish. We also added a big bullet 🔴 if we are neutral.

It is important to note that you might find a stock that we consider bullish in our analysis (in the breakouts/testing section) but it remains as a hold or partial sell in the table. The conflict here is that the table is more conservative. This will not be an issue with our clients, because our analysis will explain why we are being bullish/bearish on the stock.
