## Analysis

For the second time, the market tried to break below 10,080, but this time was able to close below this level triggering short-term stops. The break below 10,080 is a signal to sell for short-term investors.

As we mentioned before, the 9,800 will be our next target; if the market does not rise today, we will probably see a significant decline that can take the index below 9,800. Investors who are waiting for more confirmation can place their stop below this latter level.

Despite our current short-term negative view, especially if the index breaks below 9,800, we are long-term bullish on the market as we are beginning a new long-term bullish cycle.

## Small Caps Index/ EGX 70

### Analysis

The EGX 70 yesterday's decline was slight and did not break the stop yet.

The 2,150 is the current stop; a break below this level will trigger short-term stops. If this takes place, our target will be set around 2,050.

In general we do not recommend opening new positions until we see how the market will react at these levels.

### Resistance

**MFPC**  Broke sharply above 110 and above 114 to close at 115. It looks like MFPC will break its historical high that lies at 118. This will lead the stock to new highs.

### Support

No stocks broke their support yesterday

## Testing

### Support

### Resistance

**PHDC**  The 1.6 is the current resistance, followed by 1.7. On the other hand, if the stock declines from here, it will probably find support around 1.4. Those who want to step in are recommended to see whether PHDC will decline from here or not.

**CCAP**  The 1.38 level is a resistance for CCAP. If the stock breaks above this level it will witness a rise that will take it to 1.55. Position holders can place their stop below 1.28.

**DSCW**  The 0.35 is a resistance that has been broken upwards. DSCW now faces the 0.39-0.4 which, if broken, the stock will witness a strong rise that will take it to much higher levels.

| Symbol | S. Description | Last | Buying Area 1 | Buying Area 2 | Selling Area 1 | Selling Area 2 | Selling Area 3 | Stop Loss |
|--------|----------------|------|---------------|---------------|----------------|----------------|----------------|-----------|
|--------|----------------|------|---------------|---------------|----------------|----------------|----------------|-----------|

*N.B. please note that the levels are too close as these trading opportunities only suit T+0 speculators*

*The prices that are accompanied by a green arrow in the above table show resistance levels. Thus, a break above these levels will pave the way to achieve one (or all) of the targets.*

*The area between buying area 1 and buying area 2 is a trading area.*

#### Yesterday's T+0/T+1 Trades

| Symbol | Hit first Target | Hit Second Target | Hit Third Target | Hit Stop Loss | Triggered Buy | No Action |

## Guidelines

**Bullish**

**Bearish**

**Neutral**

Trend: (Upgrade, Downgrade): Change in trend color refers to upgrade or downgrade in the trend relative to the previous trend direction. E.g. change from "↓ Down" to "↔ Flat" is considered an upgrade and vice versa.

**Buy:** Buy the full position.

**P.Buy:** Buy portion of a position

**Hold:** Don't Buy or sell.

**P.SELL:** Sell portion of a position.

**Sell:** Sell the full position.

**Stop Loss:** Completely exit the position (or) Re-entry in cases of Selling.

### **Tips on reading the report**

The first page includes an analysis of two major indices in the Egyptian Stock Market; the norm is that we will analyze both the EGX 30 and 70, but sometimes we will compare the EGX 30 to its 50 counterpart if there is important information in this comparison. We also use the Hermes Last Index interchangeably with the EGX 30. The .HRMSL index has an important edge; it uses last prices instead of VWAP. First thing our clients should do is to read the indices analysis carefully to have a clear understanding on our overall view.

The second page includes stocks that broke out beyond their resistance levels, and those that violated their support levels. It also includes stocks that are testing their support levels and those that are testing their resistance. This analysis is important and it is the core of our recommendations. It is important to note though that not all stocks that are testing their support levels are bullish, and not all that are testing their resistance levels are bearish. To make it easier for our clients, we have placed a bull face 🐂 if we consider the stock under study bullish, and a bear face 🐻 if we consider it bearish. We also added a big bullet 📌 if we are neutral.

It is important to note that you might find a stock that we consider bullish in our analysis (in the breakouts/testing section) but it remains as a hold or partial sell in the table. The conflict here is that the table is more conservative. This will not be an issue with our clients, because our analysis will explain why we are being bullish/bearish on the stock.
